PROFESSIONAL EXPERIENCE

MC ASESORIA & GESTION E.I.R.L.

Peruvian company incorporated as an Individual Limited Liability Company (E.I.R.L.), with active operations before SUNAT and headquarters in Lima, dedicated to providing comprehensive consulting services in the accounting, tax, and business management areas. The firm specializes in the digital transformation of administrative processes, providing solutions ranging from company incorporation and tax planning to the implementation of ERP systems and electronic billing tools. With a focus on contingency prevention, the organization acts as a strategic partner for growing businesses, ensuring regulatory compliance through the use of current technologies and highly accurate preventive audits.

Fullstack Developer / DevOps – IT Area (fee receipt) February 2026 – July 2026

- Responsible for the design, development, and maintenance of critical systems and corporate web platforms using Angular, Java, and WordPress. Technical management of the institutional platform, ensuring Core optimization, security updates for plugins and themes, and the stability of the production environment.
- Comprehensive development of a custom CRM sales system, implementing the frontend in Angular and the backend in Java using IntelliJ IDEA for commercial automation. Participation in the SIFA - OEFA project under Cisco infrastructure, executing DevOps tasks for the approval of merges in GitLab, bug fixing, and improvements in Oracle architectures. Administration of secure environments for the OECE system through the configuration and use of Fortinet VPN, ensuring connectivity and deployment of components in SQL Server infrastructures. Guided by Figma and integrating the visual design with the functional logic of the system under user experience standards. Leadership in version management and workflow in GitLab, guaranteeing source code integrity, change control, and security in the exchange of sensitive data.
- An integral CRM sales system was developed, achieving a successful transition from manual processes to a modern architecture based on Angular and Java (Spring Boot).
- Reduced response time in incident attention by 40% through preventive technical support and bug optimization in SIFA-OEFA environments, improving web platform stability.
- Optimized the performance of the corporate web platform by 50% through corrective maintenance of the WordPress Core and debugging of critical plugins and themes.
- Ensured 100% integrity of GitLab deployments by assuming the temporary DevOps role, validating merges and applying code quality controls before moving to production.

- Implemented secure connections and remote workflows via Fortinet VPN for the OECE system, ensuring operational continuity and protected access to SQL Server and Oracle databases.
- Improved UI/UX implementation accuracy by 90% by technically translating high-fidelity prototypes designed in Figma into functional components in Angular.
- Strengthened the security and scalability of digital assets by applying development best practices and version control under government information security standards.

COSAS PERUANAS S.R.L.

Peruvian company incorporated as a Limited Liability Commercial Society since November 2009, currently active before SUNAT, mainly dedicated to IT consulting and technology management, providing development and maintenance services for digital solutions such as B2C/B2B virtual stores and websites on platforms like Magento and WordPress, in addition to offering digital marketing services (search engine optimization, social media advertising, automation and analytics), data processing and hosting and web hosting services, with infrastructure on dedicated servers and in the cloud; the company has also been registered as a provider of goods and services to the Peruvian State, and although its foreign trade activity is not registered, its focus is to support businesses and projects in their digital transformation with current technologies.

Computer Programmer – IT Area (temporary) July 2025 – August 2025

- Responsible for the continuous maintenance, optimization, and technical support of the corporate web platform developed in WordPress.
- Management of preventive and corrective maintenance of the site, including periodic updating of the WordPress Core, themes, and plugins.
- Development and creation of web pages in production environments using Magento, HTML, and the Elementor library.
- Formation of Environment Governance Teams, Component Deployment, and operational QA aligned with objectives.
- Periodic update of the WordPress Core, as well as themes and plugins, guaranteeing stability, security, and performance of the platform.

SES

Peruvian information and communications technology company mainly dedicated to providing technological services and solutions to support the digital transformation of other organizations, including software development (software factory), testing, IT personnel outsourcing and staffing, Help Desk support, technological infrastructure integration, mobile applications, electronic billing, document management, business intelligence (BI), IT training, and BPO services, with a presence in various sectors such as banking, energy, retail, government, and education, and with offices also in other countries in the region; its focus is to offer customized consulting and technological solutions to improve the business processes and productivity of its clients.

Front-End Programmer Analyst (payroll) August 2021 – February 2025

- Participated in the development and migration of banking web platforms for Scotiabank, focusing on the modernization of legacy applications towards React-based architectures. Collaborated in the construction of reusable components, integration of internal services, and optimization of the user experience, complying with strict security, quality, and regulatory standards of the financial sector, under the SCRUM methodology.
- Participated in 3 banking web platform migration projects, contributing to the successful transition from legacy technologies to modern solutions in React.
- Reduced the incidence of errors in production by up to 80% through the development of more stable components and validated forms with React Hook Form.
- Improved performance and code maintainability using componentization, best practices, and state management.
- Integrated APIs and internal services with Axios, adapting interfaces to the requirements of different regions and business units.
- Implemented clear and scalable navigation flows using React Router, improving the end-user experience.
- Supported code reviews, functional testing, and deployments, strengthening product quality in highly critical environments.

- Worked with Git, Bitbucket, and Jira, following agile processes and security guidelines specific to the banking environment.

ACADEMIC BACKGROUND

UNIVERSIDAD PRIVADA DEL NORTE. Computer Systems Engineer 2023 - Present

I.E. CIBERTEC. Computing and Informatics 2020

COMPLEMENTARY EDUCATION

UDEMY. Back-End with Python 2025

CEPS UNI. Business Excel Specialist 2017

CEPS UNI. Python Fundamentals 2021

I.E.IDAT. Web Design and Development 2022

SCRUMSTUDY. Scrum Fundamentals Certified (SFC) 2025

AMAZON WEB SERVICES. AWS Academy Graduate – Cloud Operations - Training 2025
